

Bhuvan Prakash

+91 7411127981 | bhuvanpdocs@gmail.com | [LinkedIn](#) | [LeetCode](#) | Bangalore, India

Summary

Software Engineer with strong foundations in DSA and System Design. Interning as Android Developer at MindMatrix building a Kotlin-based app. Experienced in AI-driven solutions using Python and AWS. Passionate about mobile development, machine learning, Data Structures and Algorithms and quantitative analysis.

Education

RNS Institute of Technology

B.E. in Computer Science (Data Science) | CGPA: 8.20 / 10.0

Bangalore, India

Dec 2022 – June 2026

Expert PU College

Pre-University Education (PCMB) | 92%

Mangalore, India

Jun 2020 – Mar 2022

Experience

Software Engineer Intern

Bangalore, India

MindMatrix

Dec 2025 – Present

- Building an Android application using **Kotlin**, contributing across the full development lifecycle.
- Implementing UI/UX screens following Material Design guidelines, exploring Google AI Studio for AI-assisted features and integrating REST APIs for backend communication.
- Debugging and optimizing app performance, resolving crashes and improving overall stability.

Technical Skills

Languages: Java, Kotlin, Python, C++, R, SQL, JavaScript

Mobile: Android SDK, Kotlin, Material Design, REST API Integration

Data Science & AI: TensorFlow, PyTorch, Scikit-Learn, Pandas, NumPy, NLP, LLMs, OpenCV

Web & Backend: Flask, Streamlit, HTML5, CSS3, REST APIs

Tools & Platforms: AWS (EC2, S3), Git, GitHub, Docker, MySQL, MongoDB, Google AI Studio

Projects

High-Throughput Application Load Balancer | *C++, Socket Programming, Multithreading*

Mar 2026

- Engineered a Layer 7 Load Balancer in C++ capable of handling **10k+ concurrent requests/second** with minimal latency overhead using non-blocking I/O and multithreaded request handling.
- Implemented **Round-Robin** and **Least-Connection** algorithms to distribute traffic efficiently across backend server clusters.
- Integrated active Health Checks and automatic failover mechanisms, ensuring **99.9% system availability** during server outages.

Adaptive Interview Training Platform | *Python, NLP, LLMs, AWS*

Jul 2025

- Architected an AI-powered interview simulator leveraging **LLMs** to generate dynamic, context-aware technical questions tailored to candidate responses.
- Engineered a real-time feedback loop using **NLP and OpenCV** to analyze candidate sentiment and facial expressions during sessions.
- Deployed on **AWS (EC2, S3)** with RESTful APIs ensuring low-latency performance and high availability for multiple concurrent users.

Crypto Quant Backtesting Engine | *Python, Pandas, NumPy*

Oct 2025

- Built an event-driven backtesting engine in Python to simulate high-frequency trading strategies on minute-level OHLCV data.
- Optimized execution speed by **60%** using vectorized NumPy operations instead of iterative loops for signal generation and processing.
- Implemented rigorous risk metrics including **Sharpe Ratio** and **Max Drawdown** to statistically validate strategy robustness before live deployment.

Achievements & Certifications

DSA: Solved **400+** problems on LeetCode, Codeforces, and CSES — strong focus on DP and graph algorithms.

Salesforce: Earned Trailhead points as an **Agentblazer**, gaining exposure to AI agent and CRM workflows.

Certifications: NPTEL Data Science for Engineers (Elite) | Google Project Management (Coursera)

Leadership: Captained school Football team; active hackathon participant.
